PINUS STROBUS (White Pines)

Fall 1947 — Spring 1948

Can plant from September 15th to June 1st, whenever weather and ground permissible. One of the most prolific trees grown in North Carolina.

Nursery grown, balled in earth and burlapped, f. o. b. our nursery:

1-2'	\$.60
2-3'	1.00
3-4'	1.60
4-5'	2.25
5-6'	3.50
6-7'	4.00
7-8'	5.25
8-10'	8.00
10-12'	12.00
12-14'	15.00
14-16'	18.00

~~25%~~ discount on fifty or more.

Will plant when desired at actual cost. Impossible to determine cost of planting until we have sizes wanted, quantity and distance. When planting the larger sizes you have a fine tree to start with. We will replace all trees that die during first year at one-half original cost, f. o. b. our nursery. You can be assured they will live after first year.

Any other information gladly given on request.

WILSON'S STROBOS (MILDE BIRD)

July 1945 - Spring 1948

Cow bird from September 1945 to June 1st whenever was
seen singing around Birmingham. One of the most brilliant birds
shown in North Carolina.

Nest was brown, patterned in earth and purple, 1.0. p. out

nesting:

06. 8	1-2.
10. 1	2-3.
10. 1	3-4.
22. 2	4-5.
05. 8	5-6.
00. 1	6-7.
25. 2	7-8.
00. 8	8-10.
15. 00	10-12.
00. 21	12-14.
00. 21	14-16.

200+ specimens no fifty or more

With this upon which I can't say much of interest or detail, we have to be content with the few species mentioned above to discuss. Upon balance the larger size has made a fine tree to start with. We may suppose the trees that this bird lives in are quite tall, though it is difficult to see where it

can get along with the tall trees. You can see some of the tall ones after this year.

You often hear them sing in pairs or flocks
